Professional Summary

Software Developer & Data Analyst with hands-on experience building ML-powered applications, data pipelines, and REST APIs. Proven track record in designing CNN-based fraud detection systems that reduced manual verification by 40%, and developing production-ready web applications for batch processing of 500+ records per session. Skilled in Python, SQL, Scikit-learn, FastAPI, and React; adept at translating complex datasets into actionable insights and deploying scalable, real-time solutions.

Internship Experience

AI Security Intern – Hild Defence and Aerospace

Oct 2025 – Jan 2026 | Chennai, TN

- Designed and trained a custom CNN-based fraud-detection model to authenticate government stickers, reducing manual verification workload by ~40%.
- Developed the software development of a Flask REST web application supporting batch image uploads and real-time verification reports, enabling review of 500+ records per session with structured audit logs.
- Streamlined data preprocessing pipelines (normalization, augmentation, class balancing) to improve model generalization, cutting validation loss by 15% on unseen datasets.

Data Scientist Intern – Network Geek

Jun 2025 – Jul 2025 | Chennai, TN

- Performed end-to-end data analysis and feature engineering using Python, NumPy, and Pandas — handled preprocessing, cleaning, transformation, and visualization to build production-ready ML datasets.
- Developed and evaluated Machine Learning and Neural Network models, applying cross-validation, hyperparameter tuning, and performance optimization on real-world datasets.
- Implemented and tested a text-classification module using Transformer-based embeddings, integrating it into a Python backend pipeline for automated document tagging.

Education

Misrimal Navajee Munoth Jain Engineering College – Chennai, TN

2022 – 2026

B.Tech in Artificial Intelligence & Data Science

CGPA: 8.0 / 10.0

Certifications & Achievements

Introduction to Data Analytics – SimpliLearn

2025

Full Stack Web Development with Java – Code99

2026

Technical Skills

Languages & Scripting: Python, SQL (MySQL, PostgreSQL), Bash Shell

Backend & APIs: FastAPI, REST APIs (HTTP Methods, JSON), OOP in Python, Scikit-learn, XGBoost, React

Databases: PostgreSQL, MySQL

Big Data & Cloud: Hadoop, Hive (academic exposure), Fundamentals of Cloud Computing

Tools & Environment: Linux CLI, Git, GitHub, Jupyter Notebook, VMware, Power BI

Key Projects

CNN-Based Government Sticker Fraud Detection System

2025

- Built an end-to-end image classification pipeline using a custom CNN architecture to detect forged government stickers, achieving >92% precision on a 5,000-image test set.
- Deployed the model as a Flask REST API with multi-image batch support, enabling security teams to verify documents 10× faster than manual inspection.

Credit-Card Fraud Detection System

2025

- Developed a Logistic Regression classifier to detect fraudulent transactions in a highly imbalanced dataset; applied SMOTE for class balancing.
- Evaluated model performance using ROC-AUC, Precision, and Recall, ensuring robust detection with minimal false negatives.

Smart Agricultural Decision System

2026

- Engineered a crop recommendation engine using Random Forest and XGBoost on soil NPK, pH, and humidity data for 22 crop classes, achieving 95% accuracy on the Kaggle Crop Recommendation dataset.
- Integrated real-time soil sensor data via Python scripts and deployed predictions through a Scikit-learn inference pipeline, enabling instant crop suggestions for small-scale farmers.

Languages

Tamil (Native) | English (Professional Proficiency)
